DESCRIPTORS: *Concrete, Structures, *Reinforced
concrete, Construction materials industry, Behavior,
*Fires, *Reinforcing steel, Tests, Tensile properties,
Stresses, Standards, Load distribution.

This review shows that a fire rating (appraisal) of
prestressed concrete structural members is difficult
to establish, that results of experience with reinforced
concrete cannot form the basis of such an appraisal,
and that an extensive concern with this problem is in
order. The difficulty is compounded by the fact that
hardly any usable background information is available.
